ProjectX India | 1st March 2021 edition provides you with power-packed information on 188 projects from 47 sectors of the Indian economy. In this issue we have covered 48 projects in Conceptual/Planning Stage, 23 Contract Awards, 39 Projects Under Implementation, 70 Tenders, and 8 other projects. The project information is provided along with nearest contacts as available in the public domain to facilitate B2B exchange.

This book discusses the concept and practice of a smart metropolitan region, and how smart cities promote healthy economic and spatial development. It highlights how smart metropolitan regional

development can energize, reorganize and transform the legacy economy into a smart economy; how it can help embrace Information and Communications Technology (ICT); and how it can foster a shared economy. In addition, it outlines how the five pillars of the third industrial revolution can be achieved by smart communities. In addition, the book draws on 16 in-depth city case studies from ten countries to explore the state of the art regarding the smart economy in smart cities - and to apply the lessons learned to shape smart metropolitan economic and spatial development.

Urbanization is giving rise to environmental concerns including urban flooding, which generally occurs due to the construction of houses in the low-lying areas; loss of green cover leading to a disturbance in the ecological cycle; water scarcity due to growing needs; and deforestation leading to habitat fragmentation, wildlife corridors disturbance, forest fires, and climate change. In order to correct these issues, a consolidated balance between human, nature, and spatial aspects must be resolved and spatial solutions integrated on a common platform. Addressing Environmental Challenges Through Spatial Planning is devoted to addressing environmental concerns and technology innovations in domains such as pollution, water insecurity, and resources management. This text works to bridge the gap between engineering considerations and spatial aspects of planning. Covering topics such as sustainable housing, environmental restoration, and air emissions, this text is essential for environmental engineers, planning researchers, faculty, environmental and civil

administrators, architects, consultants, environmental activists, town and country planning organizations, and professionals in all industries who aspire to have an environmentally friendly atmosphere and to provide a sustainable way of dealing with the environment in their respective domains for process efficiency and cost optimization.

The numerous and varied indicators of environmental risks point toward the likelihood of a systemic and catastrophic ecological failure at some point during this century. Political inaction and cultural resistance, meanwhile, are even preventing the implementation of already available technical solutions, which has led many experts to conclude that averting a global environmental catastrophe is, foremost, a socio-political, rather than a technical, challenge. The World Science Union (ICSU) has recognized that knowledge of the social sciences is indispensable for facilitating the major socio-cultural transformations now required, and, together with the International Social Science Council (ISSC), called for a mainstreaming of environmental research in the social sciences at the Rio+20 Earth Summit. The two major international organizations in anthropology, IUAES and WCAA, responded to this call by co-sponsoring a symposium on environmental change at the Manchester World Anthropology Congress, and by creating a scientific Commission for Anthropology and Environment, which then hosted a second symposium in Chiba City, Tokyo, in May 2014. This volume is a selection of the many papers presented by a truly international group of experts at the two symposia. It identifies and provides case study examples in six major research

areas where anthropology and local and indigenous people's knowledge can make a significant contribution: Environmental Vulnerability and Risk Perceptions; Sustainable Urban Environments; Sustainable Rural Environments and Food Security; Indigenous People and Nature Conservation; Environmental Justice and Corporate Social Responsibility; and Sustainable Resource Management. Contributors represent nine different national anthropologies across all continents. The volume thus also enacts a new 'world anthropologies' paradigm, first proposed by the World Anthropologies Network (WAN), which aspires to unify and globalize the discipline in a spirit of equality and mutual respect among scholars across all national traditions and language barriers. Furthermore, the volume will also support teaching and promote further research in the anthropology of the environment.

Re-envisioning Remote Sensing Applications: Perspectives from Developing Countries aims at discussing varied applications of remote sensing, with respect to upcoming technologies with diverse themes. Organized into four sections of overlapping areas of research, the book covers chapters with themes related to agriculture, soil and land degradation studies; hydrology, microclimates and climate change impacts; land use/land cover analysis applications; resource analysis and bibliometric studies, culminating with future research agenda. All the topics are supported via case studies and spatial data analysis. Features: Provides the applications of

remote sensing in all fields through varied case studies and spatial data analysis Includes soil and land degradation, microclimates, and climate change impacts Covers remote sensing applications in broad areas of agriculture, hydrology, land use/land cover change and resource analysis Discusses usage of GPS-enabled smartphones and digital gadgets used for mapping and spatial analysis Explores future research agenda for applications of remote sensing in post-COVID scenario This book is of interest to researchers and graduate students in environmental sciences, remote sensing, GIS, agricultural scientists and managers, forestry scientists and managers, and water resources scientists and managers.

This book studies the politics surrounding Indian emigration from the 19th century to the present day. Bringing together data and case studies from across five continents, it moves beyond economic and social movers of migration, and explores the role of politics—both local and global—in shaping diaspora at a deeper level. The work will be invaluable to scholars and students of migration and diaspora studies, development studies, international politics, and sociology as well as policy-makers, and non-governmental organizations in the field.
