The book describes the emergence of big data technologies and the role of Spark in the entire big data stack. It compares Spark and Hadoop and identifies the shortcomings of Hadoop that have been overcome by Spark. The book mainly focuses on the in-depth architecture of Spark and our understanding of Spark RDDs and how RDD complements big data's immutable nature, and solves it with lazy evaluation, cacheable and type inference. It also addresses advanced topics in Spark, starting with the basics of Scala and the core Spark framework, and exploring Spark data frames, machine learning using Mllib, graph analytics using Graph X and real-time processing with Apache Kafka, AWS Kenisis, and Azure Event Hub. It then goes on to investigate Spark using PySpark and R. Focusing on the current big data stack, the book examines the interaction with current big data tools, with Spark being the core processing layer for all types of data. The book is intended for data engineers and scientists working on massive datasets and big data technologies in the cloud. In addition to industry professionals, it is helpful for aspiring data processing professionals and students working in big data processing and cloud computing environments.

The main focus of the study is the deepening crisis of the Ethiopian education system. This study reconstructs the growth of the crisis of the sector during the last four decades. It then discusses the implications of the crisis in terms of communication breakdown; absence of analytical capacity at system level; the fragmentation of society; loss of political legitimacy and perpetuation of authoritarian power. Although the education sector has greatly expanded its impact on poverty alleviation has so far been insignificant. The poverty landscape has changed to the worse during the last fifty years. This is largely due to the fact that the Ethiopian education system is based on false premises. At the center of the crisis is the use of English as

medium of instruction. The proficiency in English is so low that its continued use as a medium of instruction can only lead to the collapse of the education system. The study argues that it is only through language (readily understood and practiced) that collective life and the world can be interpreted in an integrated manner. The replacement of English by Ethiopian languages all the way from the primary to tertiary levels is one of the factors that could strengthen the survival potential of the Ethiopian political community. The study is relevant for policy makers and students of development studies on the role of education in social change in Africa south of the Sahara.
